

Regreening Funyula Project – Kenya

Goal	To contribute to improved household food security and environmental sustainability through Farmer Managed Natural Regeneration (FMNR)-anchored greening approaches.
Problem	<ul style="list-style-type: none"> 30-35% of total land area in Kenya is either very severely degraded or has severe land degradation, where high rates of deforestation endangers both its fauna and flora. Degradation of farmlands have become so severe that they no longer produce adequate or regular crops or pasture for livestock, which poses critical challenges to food security in Kenya. Funyula is located in the energy-poor Busia county with high dependence on firewood; 83% of male and 87% of the female-headed households use firewood as the primary source of energy for cooking. Soils are poor and have a low level of fertility due to continuous repeated tilling, repeated application of chemical fertilisers and poor integration of trees in farmlands.
Key Outcomes	<ul style="list-style-type: none"> Increased restoration of farmlands ecosystems through adoption of FMNR and other greening practices for increased food production. Improved adoption of sustainable clean energy for cooking, lighting and agri-food value addition livelihood options to complement FMNR. Provided monitoring, learning and evaluation and support on the mainstreaming of FMNR through Regreening Communities project model into Funyula Area Programme.
Target Outputs	<ul style="list-style-type: none"> 2,500 acres of land under restoration through Regreening Communities model that integrates FMNR with other greening and natural resource management (NRM) practices. 2,500 farming households with improved knowledge and capacities on climate smart agriculture. 1,000 households with improved knowledge and capacities on the use of energy-efficient cooking stoves. Eco-friendly technologies adopted to reduce emissions. Project performance and learning documented.

Livelihoods, Food Security, Environmental Sustainability

Location: Funyula Division, Busia County, Kenya

Beneficiaries: Direct: **2,900** (Adults:2500 and Children:400)
Indirect: **8,750** (Adults: 2,976 and Children: 5,774)

Degraded Land to be Restored: Restoration and conservation of **2,500 acres** of degraded land

Funding need: HKD 2,180,500

Time length: Nov 2023 – Oct 2025 (2 years)
